

Carbon Reduction Plan

Supplier name: Valley Northern
Publication date 15.03.23

Commitment to achieving Net Zero

Valley Northern is committed to achieving Net Zero emissions by 2045

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions.

Baseline emissions are the reference point against which emissions reduction can be measured. Our reporting includes scope 1 & 2 and the following from scope 3

- a. Upstream transportation and distribution
- b. Waste generated in operations
- c. Business travel
- d. Employee commuting
- e. Downstream transportation and distribution

Baseline Year: 2022	
Additional Details relating to the Baseline Emissions calculations	
<i>This is our baseline emissions for year 2022 as this is our 1st year of reporting.</i>	
Baseline year emissions:	
EMISSIONS TOTAL	(tCO₂e)
Scope 1	0.00
Scope 2	24.41
Scope 3 (Included Sources)	1003.20
Total Emissions	1027.62

Current Emissions Reporting

Reporting Year: 2022 – this is same as baseline as this is our 1st year of reporting	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	0.00
Scope 2	24.41
Scope 3 (Included Sources)	1003.20
Total Emissions	1027.62

Emissions reduction targets

We already have had ISO14001 certification for 20 years and have already made a massive amount of carbon reductions such as having electric forklifts, changing our lighting to be LED and our water heaters to be electric, switching our electric providers to be fully renewable sources etc

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets. We project that carbon emissions will decrease over the next five years to 673.1tCO₂e by 2028. This is a reduction of 34.5% aligned with the NHS decarbonisation pathway (2045 goal).

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed prior to 2022,

- Changed from sending waste to landfill in general waste bins to having recycling bins which means we recycle a large quantity of our cardboard & plastic waste,
- Avoided wastage of wooden pallets by sending these for recycling into woodchips for use for biofuel.
- use electric forklift trucks in our warehouse, as opposed to other fuels, such as diesel, in order to reduce the amount of air pollution
- replacement of all of the lighting to be modern state of the art LED lighting in both the offices and all of our warehouses reducing energy consumption significantly
- we have ensured that the vast proportion of any plastic bag ranges that we offer are made from a minimum of 30% recycled content to help encourage recycling and to encourage a circular economy. Some of our bags are even made from 100% recycled material! We actively encourage our customers to switch to using more environmentally friendly alternatives in discussions with them.
- We have switched the vast majority of our customers over to paperless billing and invoicing which over the last two years alone has saved over 285kg of paper!
- We already have had ISO14001 certification for 20 years

As this our 1st year of reporting we don't have any initiatives that have occurred since the baseline figure,

In the future, we hope to implement further measures such as:

Some future projects we hope to implement in the future are as follows:

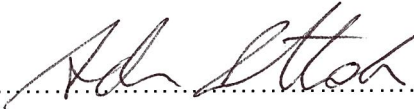

- Switch to green heating provider or purchase Green Gas Certificates
- Reduce general heating usage and waste
- Purchase carbon neutral products such as carbon neutral paper
- Encourage cycle-to-work and car share scheme
- Choose a logistics company based on sustainability
- Look at reducing usage of packaging
- Look at getting suppliers to deliver directly to our customers to save freight

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans. Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting. Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
